

ABSTRACT OF THE DISCLOSURE

A method, a system and a device for locating items are provided. The device sends a selection of at least one item to the server. The server receives the selection and accesses location information regarding the at least one item. The server sends the location information to the device, which outputs the location information. In some implementations, a user may indicate a desire to receive the location information via e-mail at an e-mail address indicated by the user. In other implementations the user may select the at least one item by using a touch screen, by saying a name of the at least one item, or by writing the name of the item on a display.
